

XC60 B6 Drive-E AWD Automatic 2023

Increased performance and Volvo Original Warranty

The Polestar Performance Optimization improves the performance of your Volvo. It makes the car more precise and active to drive and it increases safety in situations where you need extra performance, for example when overtaking or entering a busy highway. All this without increasing the certified fuel consumption, emissions or affecting the Original Warranty of your Volvo.

Fuel consumption and environment

A Volvo with the Polestar Performance Optimization has the same certified fuel consumption as the standard version. This is possible thanks to our efficient programming of the engine, which only increases the power output when it is needed, when passing or when driving up long uphill gradients or with heavy trailers. This also means that the environmental impact of the vehicles remains unchanged and is maintained within the limits of the certified emissions.

Improved performance and safety

The Polestar Performance Optimization provides your Volvo with optimized performance and better torque in the range the engine most often works in. Our racing drivers call this improving the car's drivability. They want the car to be optimized for racing, you want the car optimized for driving on streets and roads. The hands of a driver with good judgement result in better engine performance and increased passive safety in traffic.

Fast and easy to install at your Volvo dealer

The Polestar optimization is installed by your Volvo dealer. The work can easily be carried out in connection with a regular service, a tire change, installation of Volvo accessories or reconditioning. As with other Volvo Original Accessories, the Polestar Performance Optimization can increase the resale value of your Volvo.

Purchase Reference

When visiting your Volvo dealer quote the following references to describe the product you refer.

Article number: 32135199

Owners package: 32378969

Power Mid-Range (hp)

Original: 178

Dynamic power optimised: 188

Power Mid-Range (kw)

Original: 130

Dynamic power optimised: 138

Peak Power (hp)

Original: 296

Dynamic power optimised: 317

Peak Power (kw)

Original: 217

Dynamic power optimised: 233

Torque (lb-ft)

Original: 310

Dynamic power optimised: 332

Torque max (rpm)

Original: 2100

Optimised: 3500

Acceleration 0-60 mph (s)

Original: 6.2

Optimised: 6.1

What is Dynamic effect?

The Dynamic effect will generate up to 20 seconds of more power in the mid-range, peak power and torque. This effect is not considered or measured in the certification process.

What is Certified effect?

The Certified effect is the value generated in the WVTA (Whole Vehicle Type Approval).
